

# IMA Commission on New Minerals, Nomenclature and Classification (CNMNC)

## NEWSLETTER 32

---

### New minerals and nomenclature modifications approved in 2016

U. HÅLENIUS<sup>1</sup> (CHAIRMAN, CNMNC), F. HATERT<sup>2</sup> (VICE-CHAIRMAN, CNMNC), M. PASERO<sup>3</sup> (VICE-CHAIRMAN, CNMNC) AND S. J. MILLS<sup>4</sup> (SECRETARY, CNMNC)

<sup>1</sup> Department of Mineralogy, Naturhistoriska Riksmuseet, Box 50007, SE-104 05 Stockholm, Sweden – ulf.halenius@nrm.se

<sup>2</sup> Laboratoire de Minéralogie, Université de Liège, B-4000 Liège, Belgium – fhatert@ulg.ac.be

<sup>3</sup> Dipartimento di Scienze della Terra, Università di Pisa, Via Santa Maria 53, I-56126 Pisa, Italy – marco.pasero@unipi.it

<sup>4</sup> Geosciences, Museum Victoria, PO Box 666, Melbourne, Victoria 3001, Australia – smills@museum.vic.gov.au

THE information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

**Mineral name, if the authors agree on its release prior to the full description appearing in press**

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the X-ray powder diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

**Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.**

**It is still a requirement for the authors to publish a full description of the new mineral.**

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

NEW MINERAL PROPOSALS APPROVED IN  
JUNE 2016

## IMA No. 2016-013

Gadolinite-(Nd)

Malmkårra mine, ca. 2.5 km WSW of Norberg,  
Sweden (60°4'N, 15°51'E)Radek Škoda\*, Jakub Plášil, Renata Čopjaková,  
Milan Novák, Erik Jonsson, Michaela Vašinová  
Galiová and Dan Holtstam

\*E-mail: rskoda@sci.muni.cz

Gadolinite–datolite group

Monoclinic:  $P2_1/c$ ; structure determined $a = 4.8216(3)$ ,  $b = 7.6985(4)$ ,  $c = 10.1362(6)$  Å,  
 $\beta = 90.234(4)^\circ$ 4.83(72), 3.603(37), 3.191(52), 3.179(32),  
3.097(35), 3.014(35), 2.888(100), 2.607(49)Type material is deposited in the mineralogical  
collections of the Moravian Museum, Brno,  
Zelný trh 6, CZ-659 37 Brno, Czech Republic,  
catalogue number B 11298How to cite: Škoda, R., Plášil, J., Čopjaková,

## IMA No. 2016-017

Chinleite-(Y)

Blue Lizard Mine, Red Canyon, White Canyon  
District, San Juan Co., Utah, USA (37°33'26"N,  
110°17'44"W)Anthony R. Kampf\*, Barbara P. Nash and Joe  
Marty

\*E-mail: akampf@nhm.org

Structurally related to bassanite

Trigonal:  $R\bar{3}_221$ ; structure determined $a = 6.890(2)$ ,  $c = 12.767(2)$  Å  
6.01(59), 5.43(63), 3.457(46), 3.010(100),  
2.826(95), 2.136(39), 1.849(67), 1.690(28)

Cotype material is deposited in the mineralogical collections of the Natural History Museum of Los Angeles County, 900 Exposition Boulevard, Los Angeles, CA 90007, USA, catalogue numbers 65632, 65633 and 65634

How to cite: Kampf, A.R., Nash, B.P. and Marty, J. (2016) Chinleite-(Y), IMA 2016-017. CNMNC Newsletter No. 32, August 2016, page 916; *Mineralogical Magazine*, **80**, 915–922.

#### IMA No. 2016-018

Fluoro-tremolite

Limecrest-Southdown quarry, Sparta, New Jersey, USA (41°3'20"N, 74°40'60"W)

Roberta Oberti\*, Fernando Cámara, Fabio Bellatreccia, Francesco Radica and Antonio Gianfagna

\*E-mail: oberti@crystal.unipv.it

Amphibole supergroup

Monoclinic: *C2/m*; structure determined

$a = 9.846(2)$ ,  $b = 18.050(3)$ ,  $c = 5.277(1)$  Å,  $\beta = 104.80(2)^\circ$

3.381(57), 3.276(38), 3.126(67), 2.940(43), 2.706(100), 2.592(34), 2.531(59), 2.337(36)

Type material is deposited in the collections of the Franklin Mineral Museum, 32 Evans Street, Franklin, 07416 New Jersey, USA, catalogue number 7710

How to cite: Oberti, R., Cámara, F., Bellatreccia, F., Radica, F. and Gianfagna, A. (2016) Fluoro-tremolite, IMA 2016-018. CNMNC Newsletter No. 32, August 2016, page 917; *Mineralogical Magazine*, **80**, 915–922.

#### IMA No. 2016-019

Ozerovaite

Second scoria cone of the Northern Breakthrough of the Great Tolbachik Fissure Eruption, Tolbachik volcano, Kamchatka Peninsula, Far-Eastern Region, Russia (55°41'N, 160°14'E, 1200 m asl)

Andrey P. Shablinskii\*, Lidiya P. Vergasova, Stanislav K. Filatov, Evgenia Y. Avdontseva and Svetlana V. Moskaleva

\*E-mail: shablinskii.andrey@mail.ru

Known synthetic analogue

Orthorhombic: *Cmca*; structure determined  
 $a = 10.615(2)$ ,  $b = 20.937(3)$ ,  $c = 6.393(1)$  Å  
10.37(44), 5.47(47), 4.84(47), 3.07(26), 2.922(83), 2.824(100), 2.735(71), 2.208(21)

Type material is deposited in the collections of the mineralogical museum of the Saint-Petersburg State University, University Emb. 7/9, St. Petersburg 199034, Russia, catalogue number 1/19654

### NOMENCLATURE PROPOSAL APPROVED IN JULY 2016

#### 16-D: Tinzenite

Proposal 16-D is accepted, and the formula of tinzenite is modified to take into account its Mn<sup>2+</sup> content. The new formula is Ca<sub>2</sub>Mn<sub>4</sub><sup>2+</sup>Al<sub>4</sub>[B<sub>2</sub>Si<sub>8</sub>O<sub>30</sub>](OH)<sub>2</sub>, by analogy with formulae of other axinite-group minerals.

**16-E: Liguriaite** (name discredited)

Proposal 16-E is accepted. The two minerals “lavinskyite” and “liguriaite” (IMA 2014-035), which correspond to two polytypes in the OD family of lavinskyite, have to be designated as lavinskyite-2*O* and lavinskyite-1*M*, respectively. The name “liguriaite” is consequently discredited.

**16-F: Girdite** (discredited)

Proposal 16-G is accepted. The original description of girdite was based on data obtained from at least two and probably more different phases, among which are oboyerite and ottoite. Consequently, girdite is discredited.

**Ralstonite and coulsellite** (renamed)

Ralstonite and coulsellite have been recognized to belong to the pyrochlore supergroup. Following the recently approved nomenclature of pyrochlores, ralstonite has been renamed **hydrokenoralstonite**, and coulsellite has been renamed **fluornatrocoulsellite**. Both minerals have also been formally incorporated into the pyrochlore supergroup.

**IMA 2015-128** (renamed)

The new mineral IMA 2015-128 has been recently approved with the name leoszilardite (see CNMNC Newsletter 31). Shortly thereafter it turned out that the correct spelling of the person after whom the mineral took its name was Leó Szilárd. Accordingly, the new mineral has to be named **leószilárdite**.

**IMA 2008-035** (renamed)

The new mineral IMA 2008-035 has been approved with the name stetindite. Curiously enough, it took eight years before someone (Anthony R. Kampf) noted that the mineral has *REEs* as essential constituents and, in keeping with general nomenclature guidelines, its name must include a Levinson suffix. Accordingly, the mineral has to be named **stetindite-(Ce)**.

**ERRATUM**

In the CNMNC Newsletter 31, the space group of huenite (IMA 2015-122) was incorrectly given as  $P3_1/c$ . The correct space group is  $P3_1c$ .
