THE information given here is provided by the IMA Commission on New Minerals, Nomenclature and Classification for comparative purposes and as a service to mineralogists working on new species.

Each mineral is described in the following format:

Mineral name, if the authors agree on its release prior to the full description appearing in press

Chemical formula

Type locality

Full authorship of proposal

E-mail address of corresponding author

Relationship to other minerals

Crystal system, Space group; Structure determined, yes or no

Unit-cell parameters

Strongest lines in the powder X-ray diffraction pattern

Type specimen repository and specimen number

Citation details for the mineral prior to publication of full description

Citation details concern the fact that this information will be published in the *Mineralogical Magazine* on a routine basis, as well as being added month by month to the Commission's web site.

It is still a requirement for the authors to publish a full description of the new mineral.

NO OTHER INFORMATION WILL BE RELEASED BY THE COMMISSION

REVISED CHEMICAL FORMULA

After the approval of the new mineral keyite
(IMA No. 2016-090; see CNMNC Newsletter
35), the authors of the proposal communicated
results of subsequent analytical work on this
mineral, which shows higher contents of CO_2
and lower concentrations of H_2O . The new data
were examined carefully by the CNMNC
officers and were found reliable. The new
revised simplified formula $Ca_9(UO_2)_4(CO_3)_{13} \cdot$
 $28H_2O$ has been approved executively.

ERRATUM

IMA No. 2017-010 Levantite

In CNMNC Newsletter 37, the type locality was
given incorrectly. The correct type locality is:
Har Parsa (Mt. Parsa), Hatrurim Basin, Negev
Desert, near Arad, Israel ($31^\circ 12' 29'' N$, $35^\circ 16'$
 $45.6'' E$).
